Global Analysis of KPIs

Year	Total Sales (k\$)	Sales variation	Total Profit (k\$)	Profit variation	Profit Margin (%)	Total Quantity (units)	Quantity variation
2014	483,72		49,45		10,22	7572	
2015	470,53	-2,73%	61,62	24,61%	13,10	7979	5,38%
2016	608,5	29,32%	81,66	32,52%	13,42	9825	23,14%
2017	732,51	20,38%	93,26	14,21%	12,73	12000	22,14%
2019	483,72	-33,96%	49,45	-46,98%	10,22	7572	-36,90%
2020	470,53	-2,73%	61,62	24,61%	13,10	7979	5,38%
2021	608,5	29,32%	81,66	32,52%	13,42	9825	23,14%
2022	732,51	20,38%	93,26	14,21%	12,73	12000	22,14%

Growth cycles: 2014-2017 & 2020-2022 → 2016 = Record year

Slowdown phase: 2018-2019

Recommendations

Time-based Sales Analysis

- **Intensify marketing campaigns before the end of the year** to maximize sales in key months (September, November, December).
- **Stimulate demand at the beginning of the year** (after the holidays) to smooth activity.
 - Better distribution of turnover over the year
- **Adapt stock management** to anticipate seasonal peaks.
 - Avoid any breakdowns and additional operational costs

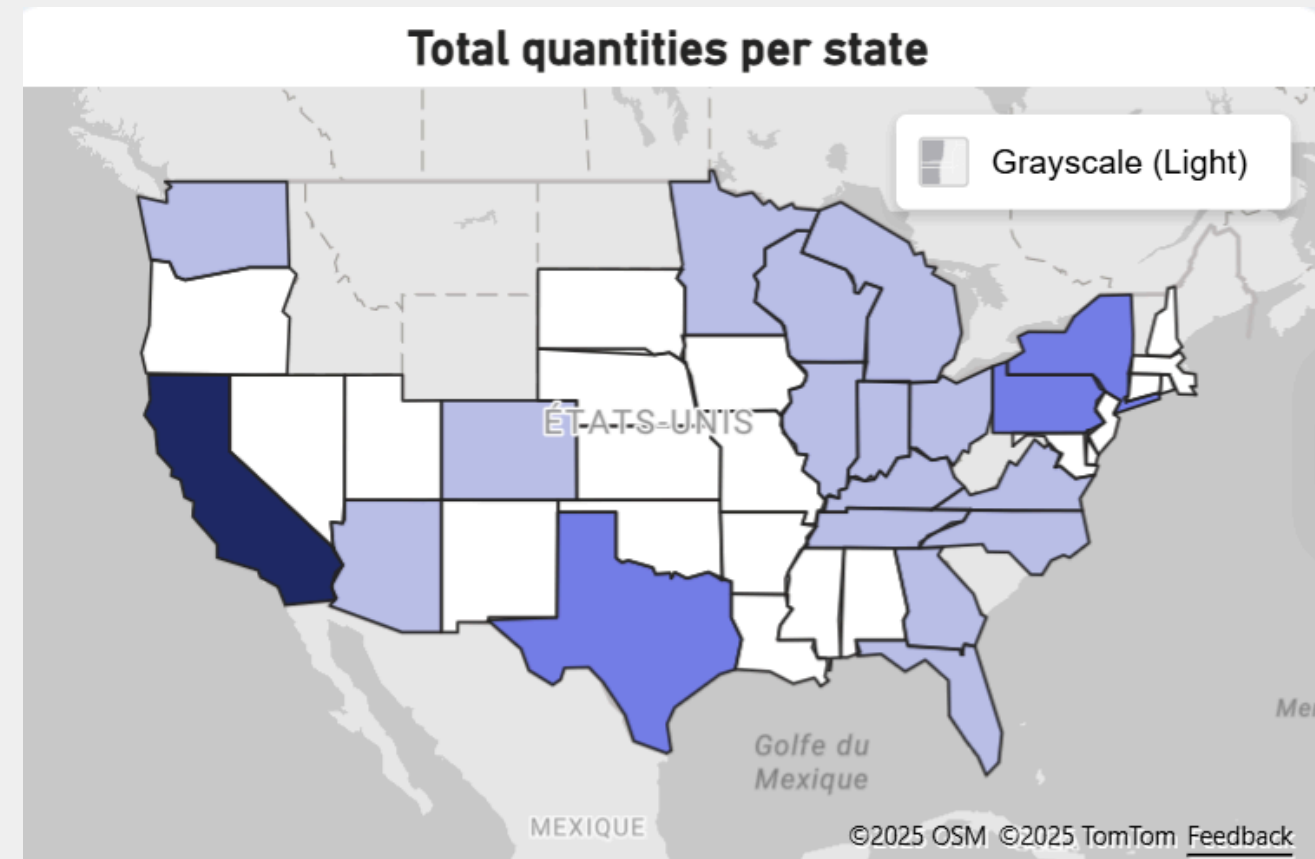

Analysis Results

Geographical Analysis

- Shows unit distribution across U.S. states
- Darker color = higher sales volume
- Concentration in the east & west coasts

Main Markets (High Volume) :

- **California & New York** → $>1/3$ of national sales
- **Texas, Pennsylvania** → key role in the company's performance

Analysis Results

Geographical Analysis

In the center of the country :

- High margins → Smaller sales
- Smaller markets → cost effective

Low / Negative margins :

- Southern states like **North Carolina(-3.77%)**
 - Too many discounts or high costs
- Quicly correction → Improve profitability

Gray states:

- North and mountain regions → no sales yet
 - Development : digital marketing or small pilot projects

State	Quantity Sold	Profit Margin (%)
South Dakota	114	29.20%
Georgia	1,426	24.87%
New Mexico	366	22.17%

Recommendations

Geographical Analysis

The company should:

- **Keep strengthening coastal markets:**
 - Because they are the backbone of our business
- **Expand in high-margin central regions:**
 - Balance national coverage and reduce dependency on coastal markets.
- **Review pricing and discount policies:**
 - The goal is to make every unit sold cost-effective

Recommendations

Discount Analysis–Sales

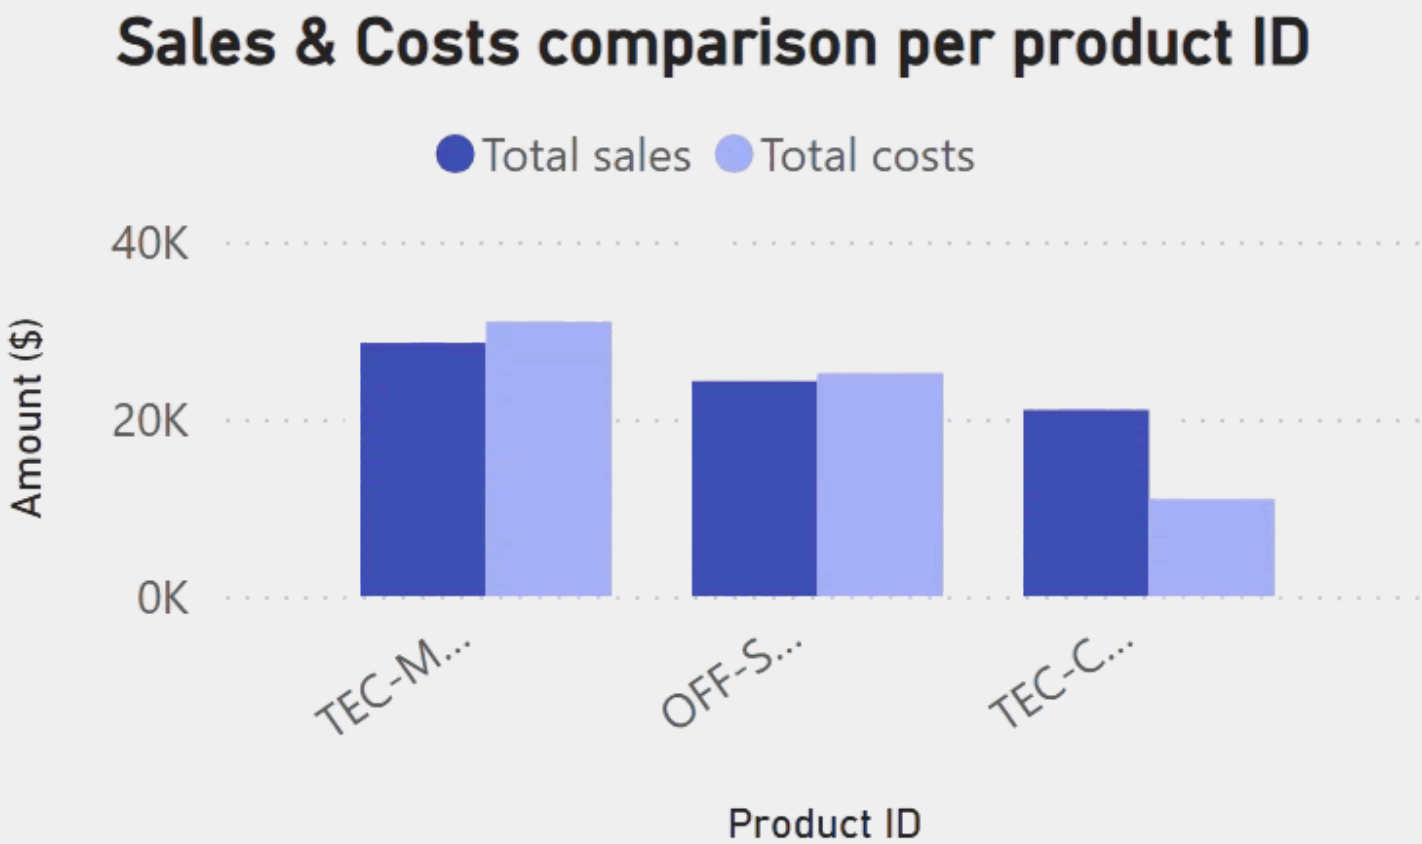

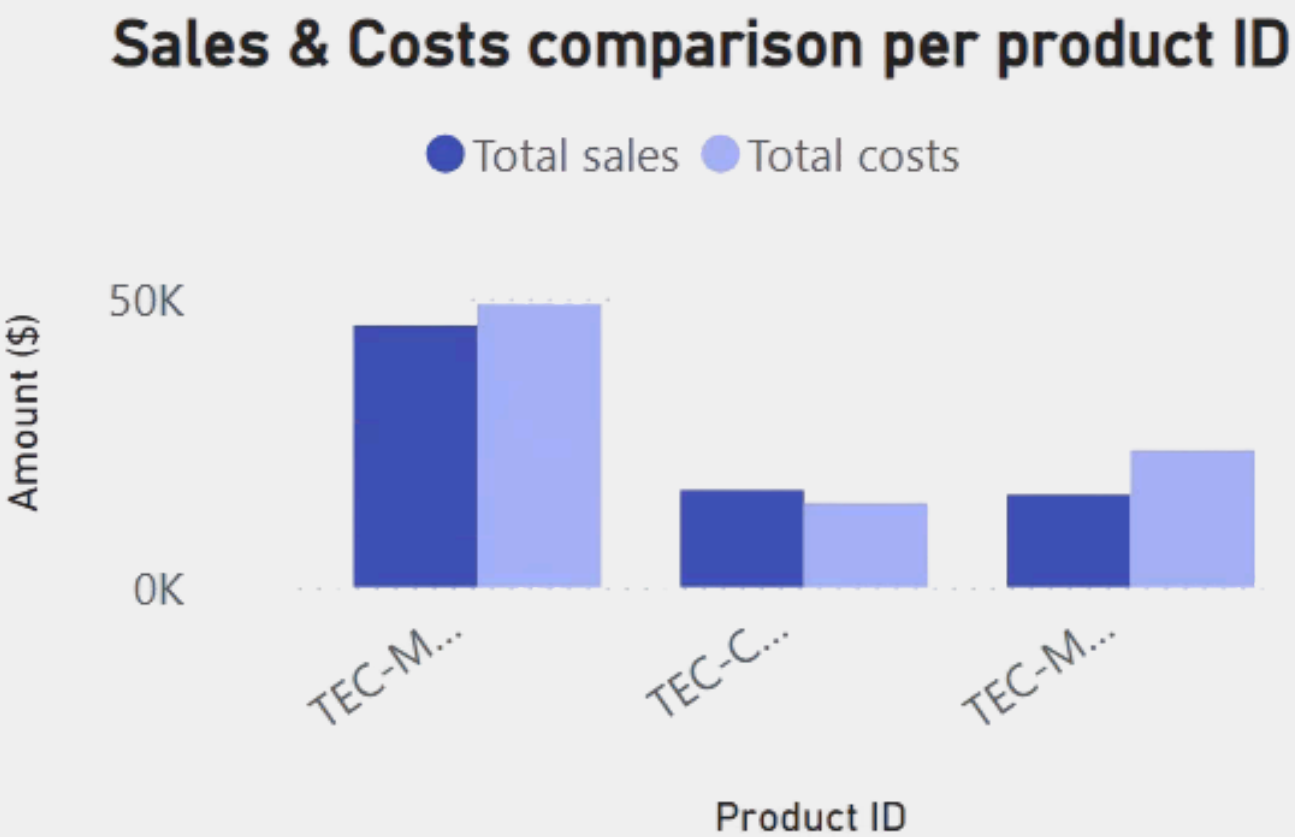

- **Adjust the discount policy**
 - Better target high-potential customers.
- **Encourage** the most price-sensitive to buy more, while offering attractive discounts.
 - Allows to preserve suitable margins

Geographical Costs

Product Analysis

South

Central

Recommendations

Product Analysis

High sales volume does NOT guarantee profitability!

What to do?

- Hard floor on discounts (high-cost items)
- Investigate logistics and costs in the South and Central regions

Why?

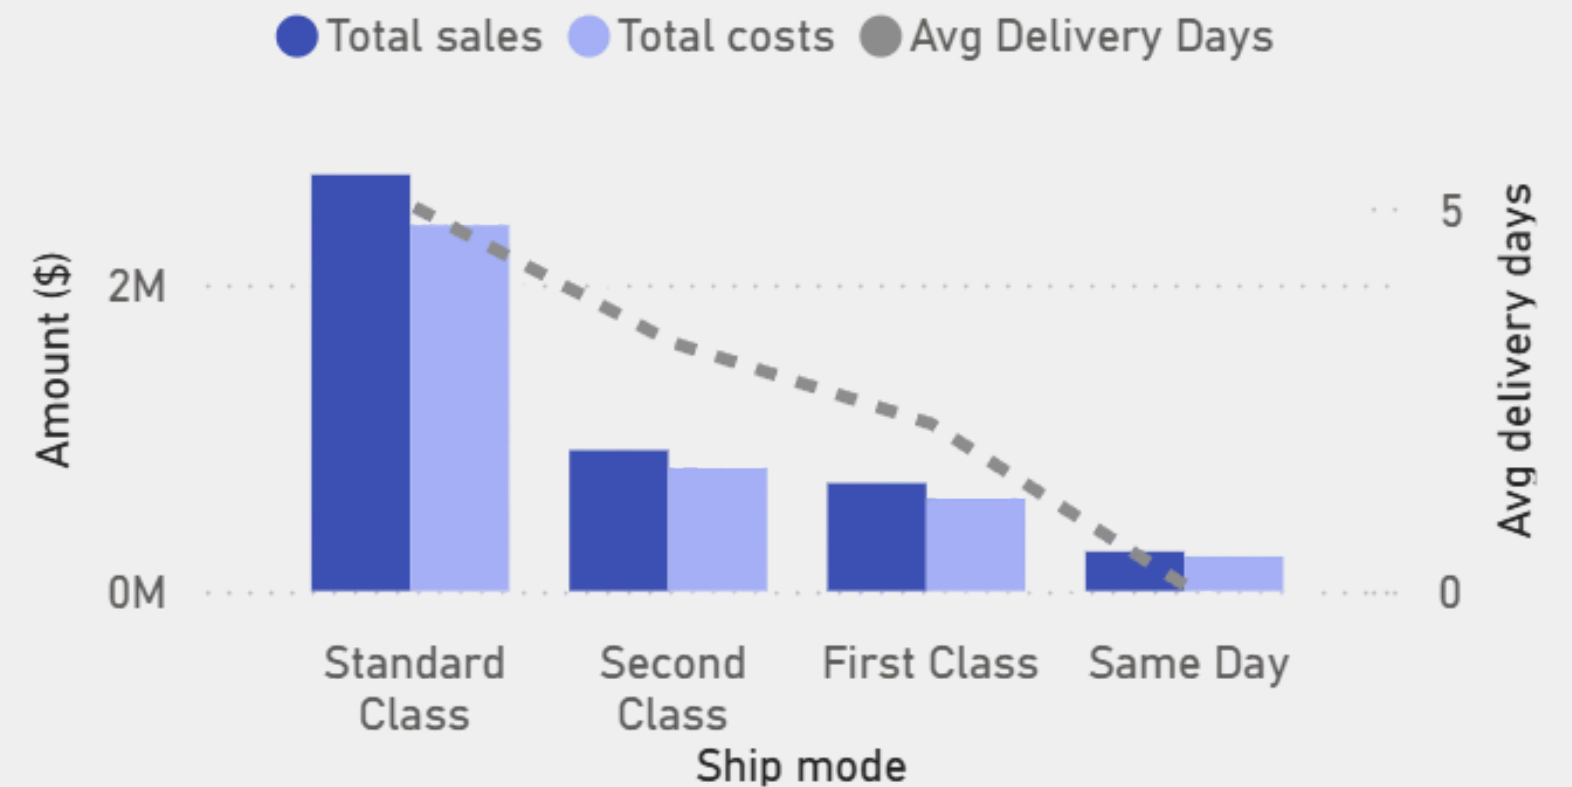

- Reduce expenses
- Implement strategic regional price increases

Analysis Results

Shipping Analysis

- Standard class dominates in terms of sales
- Same day is the lowest, being used only for urgent deliveries
- Second and first class in between
- Same order for the average delivery days

Sales, Costs & delivery days per ship mode

Possible causes

Shipping Analysis

- **Uneven logistics infrastructure:**
 - Some regions are far from distribution centers
- **Carrier network limitations:**
 - Lack of dedicated First class or same day capacity → overlapping delivery duration
- **Stock allocation inefficiencies:**
 - Orders shipped from distant warehouses when local stock is low

Recommendations

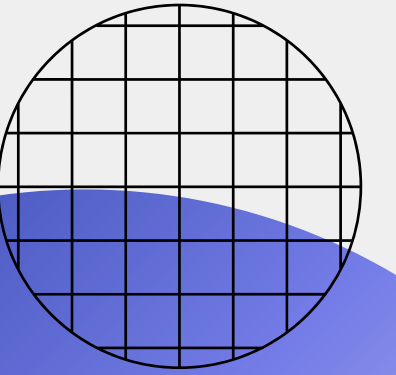

Shipping Analysis

- **Region-targeted strategy:**
 - Adapt default shipping modes by local performance & customer preference
- **Dynamic pricing:**
 - Align shipping prices with real delivery times and costs
- **Customer transparency:**
 - Show accurate delivery estimates per region/mode at checkout
- **Predictive optimization:**
 - Use ML models to recommend optimal shipping mode per order
